

GREEN CHEMISTRY DEVELOPMENT IN SPAIN

M. Mautone

ULPGC, Dept. Processes Engineering

mautone@canarias.org

This compilatory work is aimed to review the Green Chemistry situation in Spain and its context, during the last decade. Less polluting or nonpolluting alternatives on chemistry are now the most widely used terms.

This poster presents a sum up of different initiatives carried out by different sectors of the Spanish society, towards giving green chemistry Principles a long-term meaning and direction to a component of academic research.

It resumes different sectors: Government, Research, The Green Chemistry Institute of Spain, Private Sector, Associations and a complete chart of the work of 14 Universities and 2 National Institutes working in Green Chemistry, describing: activities, contact info and personnel.
